## NativeAndroidLoggerANE - Developer Documentation

### Getting started:

Optional: check if the extension is supported.

```
var bool:Boolean = NativeLoggerANE.getInstance().isSupported();
```

### Initialize the extension:

```
NativeLoggerANE.getInstance().init(debugModeEnable:Boolean = false,  
tag:String = "AIR");
```

Debug mode: toast notification of exceptions.

Tag: use any string. Default tag is "AIR".

### Functions:

```
NativeLoggerANE.getInstance().debug(message:String);  
NativeLoggerANE.getInstance().error(message:String);  
NativeLoggerANE.getInstance().info(message:String);  
NativeLoggerANE.getInstance().verbose(message:String);  
NativeLoggerANE.getInstance().warn(message:String);
```

### Permissions:

No special permissions needed.
